DETAILED ACTION

1. Claims 1-24 are pending in this office action.

2. Applicant's arguments, filed June 25, 2005, have been fully considered but they are not persuasive.

Claim Rejections

3. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim Rejections - 35 USC § 102

4. Claims 1-24 are rejected under 35 U.S.C. 102(b) as being anticipated by Elgamal et al. US (5657390).

As per claims 1,9 and 17: Elgamal discloses a method of responding to at least one request for communication, comprising:

- Receiving the request from a client computer system intended for a server; (Col
 7, Lines 12-15)
- Generating a response to the request sineprocessly; (Col 7, Lines 20-26) and
- Providing the response to the client computer system sineprocessly. (Col 7, Lines 20-40)

Application/Control Number: 10/042,886

Art Unit: 2136

As per Claims 2,10 and 18: Elgamal discloses the method of claim 1 additionally comprising:

- Receiving from the client computer system a response to the response provided;
 (Col 7, Lines 41-47) and
- Providing the request to a server responsive to the receiving the response to the response step. (Col 7, Lines 52-56)

As per claim 3,11 and 19: Elgamal discloses wherein the providing a response step comprises assigning a first identifier to the request; (Col 7, Lines 20-24 / connection identification) and additionally comprising:

- Receiving from the server a response to the request provided to the server, said response to the request provided to the server comprising a second identifier;
 (Col 8, Lines 32-35/session_identification) and
- Associating the first identifier with the second identifier. (Col 9, Lines 6-9)

As per claims 4,12 and 20: Elgamal discloses the method of claim 3 additionally comprising:

 Receiving from the client computer system following the receiving from the server step a first subsequent communication comprising the first identifier (Col 10, Lines 3-6); and Art Unit: 2136

Providing to the server a second subsequent communication comprising at least
a portion of the first subsequent communication having the first identifier replaced
with the second identifier. (Col 10, Lines 20-24)

As per claims 5,13 and 21: Elgamal discloses the method of claim 4 wherein the providing to the server the second subsequent communication step is responsive to a first criteria corresponding to a second criteria of the server. (Col 10, Lines 11-17)

As per claims 6,14 and 22: Elgamal discloses the method of claim 1 wherein the request comprises a client hello. (Col 7, Line 13-14)

As per claims 7,15 and 23: Elgamal discloses the method of claim 6 wherein the response comprises a server hello. (Col 7, Lines 20-21)

As per claims 8,16 and 24: Elgamal discloses the method of claim 1 wherein at least one selected from the response and the request comprises a communication in at least one format selected from SSL and TLS. (Col 6, Lines 38-45)

Response to Arguments

5. Applicant argues the definition of "sinprocessly" was clearly defined in the specification and therefore the rejection is incorrect because Elgamal does not teach generating and providing a response to the client sineprocessly.

Application/Control Number: 10/042,886 Page 5

Art Unit: 2136

Regarding applicant's arguments, examiner disagrees with applicant. The definition of sineprocessly says that any or all of the source IP address, source port, and protocol identifies the client. If the client is identified by **any** of the above, and the source port is chosen, a client cannot be determined from just a source port. Similarly, a source IP address cannot correctly identify a client. To properly identify a client, there needs to be an IP address along with a port. By simply saying the server handles subsequent requests from a client by its port would not derive at an operable device. For example, a server that identifies port 443 (common port number for SSL) would obtain a whole list of client devices. Similarly, only identifying a client by IP address, 123.456.789.012 might get the right client, but would it be for FTP, HTTP, SSL, etc. Therefore, "sineprocessly" lends way to a confusing, if not nonfunctional, definition. Also, it cannot be determined from the independent claim if only a client and server are existent, or if a third device is involved which intercepts the client-hello message and responds to that.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. Patent No. 6,449,647 to Colby et al., 6,389,462 to Cohen et al., and 6,006,264 to Colby et al. all disclose a device between the server and client that intercepts requests from clients and provides responses to the client.

Art Unit: 2136

7. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Brandon S. Hoffman whose telephone number is 571-272-3863. The examiner can normally be reached on M-F 8:30 - 5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ayaz R. Sheikh can be reached on 571-272-3795. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
